

FORM FACTOR CARD WITH STATUS INDICATOR

Abstract of the Disclosure

5 A form factor card compatible for use with a host electronic device that is
capable of communicating a status of the form factor card to a user of the host
electronic device. The form factor card comprises an adapter region for interfacing
the card with the host electronic device, an on-card electronic device for performing
a task for the host electronic device, an on-card intelligent controller, and an
indicator in communication with the on-card intelligent controller to communicate
10 an operational status of the form factor card.
